SYNOPSIS

_____ is a web application for students in our CCSIT centre. The name _____ means the Knowledge Shop. In this online studying era students can't manually get the previous year's question papers and reference books from the library. Through this application we mainly aim to provide a common platform for our fellow mates and teachers for their doubt clearance and sharing study materials respectively.

There are several systems in the current world. Even though there are so many applications for study material storage students in our CCSIT centre suffers to find out proper materials in proper time. That is because our teachers shares these materials in different platforms. Hence this makes difficulties for students when it is necessary. We are not trying to replace such systems, but are trying to provide a common platform for our centre. Hence the comparison made with existing system does not have any relevance.

Modules

1. ADMIN

2. TEACHER

3. STUDENT

ADMIN

Admin manages the system, all activities in the system is controlled by admin.

- Register the courses.

- Approve and decline the teachers.

- Approve and decline the student details.

- Add subjects.

- Approve and decline study material.

- Provide necessary notifications.

- View registered teachers and students.

- Edit notifications.

.

TEACHERS

- Add student details.

- Add study material.

.

- Edit study material.

- View profile.

- View notification.

STUDENT

- View profile.

- View study material.

- View notifications.

- Download study material.

SYSTEM SPECIFICATIONS

Hardware Specifications

The selection of hardware configuration is a very important task related to the software development. The processor should be powerful to handle entire operations.

Processor : Intel 3 and above

Memory : 512 MB RAM

Hard Disk Drive: 1 GB

Keyboard : QWERTY

Components : Scroll Mouse.

Display : 14 inch Color Monitor

Software Specifications

The major element in building a system the selection of compactable software. The software requirement of the system on which the project was developed is as follows:

Operating system: Windows 7 above

Front end : CSS, JavaScript

Back end : PHP, MySQL
